Question 1 | Correct Mark 1.00 out of 1.00

Given an array A of sorted integers and another non negative integer k, find if there exists 2 indices i and j such that A[j] - A[i] = k, i != j.

Input Format:

First Line n - Number of elements in an array

Next n Lines - N elements in the array

k - Non - Negative Integer

Output Format:

1 - If pair exists

0 - If no pair exists

Explanation for the given Sample Testcase:

YES as 5 - 1 = 4

So Return 1.

For example:

Input	Result
3 1 3 5 4	1

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>

int main() {
    int n;
    scanf("%d", &n);
    int arr[n];

    for (int i = 0; i < n; i++)
        scanf("%d", &arr[i]);

    int k;
    scanf("%d", &k);

    int i = 0, j = 1, found = 0;

    while (i < n && j < n) {
        if (i == j) {
            j++;
            continue;
        }

        int diff = arr[j] - arr[i];

        if (diff == k) {
            found = 1;
            break;
        } else if (diff < k) {
            j++;
        } else {
            i++;
        }
    }

    printf("%d\n", found);
    return 0;
}

```
