J2

**Started on** Monday, 3 November 2025, 3:21 AM**State** Finished**Completed on** Monday, 3 November 2025, 3:23 AM**Time taken** 2 mins 6 secs**Marks** 1.00/1.00**Grade** 10.00 out of 10.00 (100%)

**Question 1** | Correct | Mark 1.00 out of 1.00

Given two strings find the length of the common longest subsequence(need not be contiguous) between the two.

Example:

s1: ggtabe

s2: tgatasb

|    |  |          |   |          |          |   |            |
|----|--|----------|---|----------|----------|---|------------|
| s1 |  | a        | g | <b>g</b> | <b>t</b> | a | <b>b</b>   |
| s2 |  | <b>g</b> | x | <b>t</b> | x        | a | y <b>b</b> |

**The length is 4**

Solveing it using Dynamic Programming

For example:

| Input | Result |
|-------|--------|
| aab   | 2      |
| azb   |        |

**Answer:** (penalty regime: 0 %)

```

1  #include <stdio.h>
2  #include <string.h>
3
4  int max(int a, int b) {
5      return (a > b) ? a : b;
6  }
7
8  int main() {
9      char s1[100], s2[100];
10     scanf("%s", s1);
11     scanf("%s", s2);
12
13     int n = strlen(s1);
14     int m = strlen(s2);
15     int dp[n+1][m+1];
16
17     // Initialize dp table
18     for (int i = 0; i <= n; i++)
19         for (int j = 0; j <= m; j++)
20             dp[i][j] = 0;
21
22     // Fill dp table
23     for (int i = 1; i <= n; i++) {
24         for (int j = 1; j <= m; j++) {
25             if (s1[i-1] == s2[j-1])
26                 dp[i][j] = 1 + dp[i-1][j-1];
27             else
28                 dp[i][j] = max(dp[i-1][j], dp[i][j-1]);
29         }
30     }
31
32     printf("%d\n", dp[n][m]);
33     return 0;
34 }
35

```

|   | Input        | Expected | Got |   |
|---|--------------|----------|-----|---|
| ✓ | aab<br>azb   | 2        | 2   | ✓ |
| ✓ | ABCD<br>ABCD | 4        | 4   | ✓ |

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
